EZ Innovation Slashes Prices on the EZ Headset Holder — Now Made in the USA

Aviation pilots can now enjoy premium headset storage at a fraction of the former cost!

ARLINGTON, WA — EZ Innovation is proud to announce a significant price reduction across its popular EZ Headset Holder product line, made possible by bringing manufacturing fully in house right here in the United States. The move directly addresses the number one piece of customer feedback EZ Innovation has received: the price.

The EZ Headset Holder offers pilots a fast, easy, and reliable solution for aviation headset storage. Featuring a secure suction cup windscreen mount and tool-free installation that takes just minutes, the product has earned a loyal following in the general aviation community — and now it's more accessible than ever.

New pricing is as follows:

- **EZ Single Headset Holder:** \$20.00 (*was \$39.99*)
- **EZ Single Headset Holder — 2 Pack:** \$35.00 (*was \$69.99*)
- **EZ Dual Headset Holder:** \$25.00 (*was \$47.99*)

"We heard our customers loud and clear — the price was the barrier," said EZ Innovation. "By bringing production in-house, we were able to make meaningful changes without cutting corners. The new product meets all of our testing requirements and performs at the same high standard our customers expect."

The redesigned, domestically produced EZ Headset Holder maintains full compatibility with a wide range of aviation headsets and aircraft windscreens, and continues to meet all performance and quality benchmarks established by EZ Innovation's engineering team.

The updated product is available now at ez-innov8.com/ez-headset-holder.
